Parag Parikh Large Cap Fund

An open ended equity scheme predominantly investing in large cap stocks

Broad, cost efficient exposure to India's top 100 companies by full market capitalization through efficient implementation and smart execution strategies.

What Is This Fund Trying to Do?

The fund seeks to provide low-cost, broad large-cap exposure with implementation designed to manage trading and impact costs while aim for keeping returns close to the index over time.

Broad Diversification

Exposure to India's top 100 large-cap companies provides broad market coverage.

Costs Efficiency

Efficient management of fund execution costs may allow a larger share of your returns to stay invested with you.

Low Active Share

Portfolio positioning that seeks to stay close to the benchmark, aiming to reduce stock-selection risk.

Smart Execution

Investment strategies aimed at managing execution costs and supporting net returns.

Understanding Smart Execution Strategies

- **Single-Stock Futures**
  When a stock's near-month futures trade below the cash price, the fund may use futures to create exposure more efficiently, subject to limits and regulations.
- **Index Futures**
  Similarly, if index futures trade below index levels, the fund may use them to obtain exposure efficiently and manage implementation costs.
- **Merger Arbitrage**
  When a company in the index is merging with another firm, the fund may buy the stock at a discount to the merger ratio for better execution.
- **Smarter Rebalancing**
  When the Nifty 100 changes, the fund may rebalance gradually rather than on the exact index date to seek better execution prices.
- **Opportunistic Active Share**
  Around corporate actions like demergers or special situations, the fund may phase entries and exits to manage impact costs while keeping overall active share low (under 10%).

Who decides what to Buy?

Rules driven Stock Selection

Stock Selection:

- AMFI Tier I Benchmark - Nifty 100 TRI: Covers top 100 companies as per Market cap

Stock Weightage:

- Based on stock's free float market capitalization
- Weight of any holding capped at 10%

Team Chooses Optimal Implementation for Smarter Execution

Positions are implemented using efficient instruments and timing (e.g., futures, gradual rebalancing) to achieve portfolio alignment with top 100 companies based on market capitalization.
